

OUTDOOR CLASSROOM

Sharing knowledge, to empower the next generation of do-ers, thinkers and dreamers.

“Challenge your school;
Build your own classroom”

A project that will leave its mark at school but leave a life-changing impression on each child

Could all your pupils share one year-long project to build a classroom?

A partnership with Learning From The Land could help you realise this extraordinary idea.

Bringing sustainability to the curriculum through hands-on learning, this is a fully structured program to build and learn under the guidance of experienced builders and teachers.

Using nature's best materials to build a classroom..

The chance for everybody to touch,
feel and play with sustainability through;
Classroom activities,
Outdoor play,
Hands-on work with materials,
Building safely,
Ownership of their work
And the 'I DID THAT!' feeling.

The Classroom

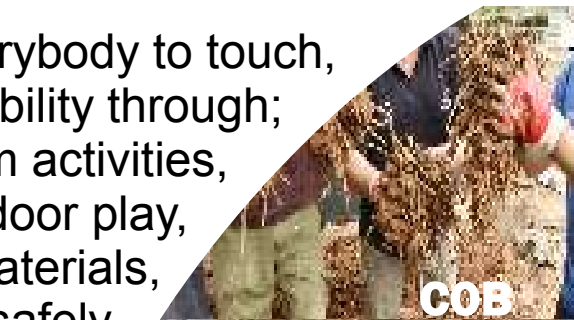

The structure will be made of
telegraph pole supports and a
simple roof with a living roof finish

This will allow the walls to be
infill - no structural integrity.
Each wall will be a different material

Finish and decoration will be
unique and personal.

4 Key Points.

- Learning through doing.
- Curriculum enrichment.
- Every teacher and pupil will be involved.
- Sustainability for all.

NEXT STEPS... to having a school challenge.

Integrating with the curriculum

Learning from the Land will:

Run sustainability day for teachers;

Create action plan for each year with the teacher;

Provide materials for construction;

Develop outcomes for each class;

Run hands-on days for each class.

Time frame

The school and Learning from the Land will partner for the project and agree to a one academic year program.

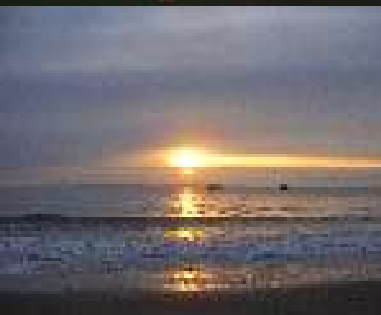

Funding

Learning from the Land will seek funding assistance from a variety of sources. The school will need to give an initial agreement of support and may be required to provide match funding.

Outcomes

Learning from the Land hopes the school will end up with more than a classroom. The teachers will become empowered to integrate sustainability into the curriculum and the pupils will aspire to create a greener, local, entrepreneurial society.
